Os seguintes dados podem ser coletados e vinculados à sua identidade: Informações de contato Conteúdo do usuário Identificadores Dados de utilização Diagnóstico As práticas de privacidade podem variar, por exemplo, com base nos recursos que você usa ou na sua id. Saiba mais Site do desenvolvedor Suporte do app Política de privacidade It is not always easy to catalog exactly what students are working on, but with the Seesaw app for iPad, you can easily create learning diaries by dropping images of projects that can then be viewed by teachers and shared with parents. Here's how it works... What is Seesaw? Seesaw: The Learning Journal (Seesaw Inc., free) is a free iPad app that allows students to build a digital portfolio of all the projects they worked on in the classroom. It was made by the same developers as the excellent Shadow Puppet app, U portfolio is incredibly easy to add resources, but it's in different ways: using the iPad camera, painting the radsheet, diagram, what other paper-based work, snooteing the video how you would give a recorded account of things learned, add items from Camera Roll, and i directly extract

the app how to perfect diagrams and whites about it on what you learn. Once uploaded to Seesaw, students can then add notes as well as voice comments to items for additional explanation. From a teacher's point of view, Seesaw allows you to browse and sort resources from across the class (first you need to set up a free Seesaw classroom account, and then join students with qr code scanning). It's all in one place, so you can scroll through full-class shows or drill down into a particular student's job and easily access the entire lot on an iPad from anywhere. Seesaw also add PDF support so that you can export from Book Creator or Pages as PDF and then import into Seesaw, as well as support for adding ePub to Seesaw. How can it benefit the classroom? It gives students the opportunity to create and organize their own work in a digital magazine, which gives them the power to develop academic voice and collaborate with classmates. And by entering a parent's communication aspect, with real-time notifications, it gives an insight into what their children do during the day, as well as giving them an opportunity to support learning at home. What's the best feature? While Seesaw is great for students and teachers, we really like how there's also an extra bonus to be able to share your work with your parents. When a teacher approves the submitted part of the work, the feature in Seesaw sends automatic notifications to parents' iPad or iPhone. This means that they can see what their children have been doing in the classroom, and they can talk to them about work later at home. Parents just need to set up and sign up for their free Seesaw account. Where can I get it? Seesaw: The Learning Journal (Seesaw Inc. for free) can be got from the App Store on the iPad or here on iTunes. All you need to start is to sign up for a free Seesaw account. Bring the Power of Seesaw and additional premium features to all students, teachers and families. Additional benefits include the possibility to: - See student progress of the year. Get real-time insights into schools in all learning. Centralize the setting and management for your school or district Dec 8, 2020 Version 7.5.5 – Reliability improvements for downloading fasts I teach 1st grade, and I like how Seesaw allows my students and feels to share what's going on in our classroom. My students are able to record their voices, photograph their work and share their thoughts with me and their families via Seesaw. It's also a very quick way to communicate with your parents. I use Seesaw to send weekly newsletters and send last-minute notifications. A great way for teachers, parents and students to stay connected! It is also a great place for teachers to share things with each other. I use so many tasks from the community of teachers at Seesaw to advance in mind and learning in my The only thing I want is to be different at Seesaw, to wish that I could only assign things to certain students instead of the whole class. It would help me differentiate my assignments. Maybe there's a way to do it, and I haven't figured it out yet... 🙏💡 't really be sure. But overall, Seesaw was such a neat tool and resource for my classroom! I've always loved Seesaw, but when we suddenly threw ourselves into learning remotely, I had to think on my feet and use Seesaw on a whole new level. Seesaw didn't disappoint! I was able to use it to assign activities to students at different levels on different days at different times. It could provide feedback and interaction with students either through text or audio recordings. I could even record themselves so they could make changes to their tasks so they could see how they should do their job. I also created a class blog that my students could interact with each other while they were at home. This allowed them to post pictures or videos and comment on each other's posts. I was still a moderator on all of these. I'm so flat on this that my district has now bought it for all our elementary schools to use! I highly recommend it!!!! Like many, I am convinced that during the Covid-19 pandemic, I used the Seesaw app for remote learning. In general, the app has been useful for teachers to share class plans and use an app similar to the social media platform (FB) to respond to teacher jobs by working their tasks. Unfortunately, this is also why I only rate the app 3 stars. The problem is that when I respond to an activity published by a teacher, there are no indicators that a particular task has been completed/responded to, which has resulted in me spending a lot of time searching for activities that need to be completed. I like this issue that it has read an email in Outlook and then returns later for this one email, but all emails are marked as unread. It would be great if the developer had created funds for completed allocations, which should be emphasised to have been responsive/completed. In addition, it would be useful if the application stated that the instructor had reviewed the work of the students and whether it should be re-examined. The developer, Seesaw Learning, Inc., has suggested that the app's privacy practices may include data handling as described below. For more information, see the developer's privacy policy. This information may be collected and linked to your identity: Contact data Identifiers User Content Usage data Privacy Diagnostics may vary, for example depending on the features you use or age.
